Phone No: 03068565775

## Education

---

### **Gov. degree Science and Commerce Landhi Korangi 6**

*Intermediate with karachi board*

### **Dar-ul-Madinah School**

*Matriculation with karachi board*

### **Web and Mobile App development**

I have done one year Web and Mobile App Development course in Saylani Mass IT Training (SMIT).

## Skills

---

**Languages:** HTML, CSS, JavaScript, TypeScript, ReactJS, React Redux, Firebase, Progressive Web App (PWA)

**Frameworks:** TailwindCSS, Bootstrap5, AntDesign, React Bootstrap

**Tools:** Git/GitHub, VS Code

## Experience

---

### **Rayon Studios** | *React developer*

December. 2023 - Present

Individually designed and developed complete websites, ensuring mobile responsiveness . Built and implemented functionalities and logic as a Junior React/JavaScript Developer.

### **IT Panda** | *Internship*

June. 2023 - October. 2023

I completed a 4-month internship at IT Panda, working on various frontend JavaScript and React projects. This experience helped me enhance my web development skills and gain hands-on experience with modern technologies.

## Projects

---

### **Crystal Emporia (Ecommerce)** | *React, Redux, Routing, Git*

- \* Crystal Emporia is a fully functional, live e-commerce project I developed for a client using React, Redux, and React Router for seamless navigation. It integrates third-party APIs for dynamic product management, including features like user authentication, product search, and a responsive shopping cart. The project is optimized for performance and deployed in a live environment, offering a smooth user experience across devices.
- \* <https://crystalemporia.com/>

### **Olx-CLone** | *React, Redux, Firebase, Git*

- \* I created an OLX Clone project using React, Firebase, Redux, and React Router. This project involved integrating Firebase for user authentication and data storage, managing global state with Redux, and implementing dynamic routing for smooth navigation between different pages. The project is available on GitHub, showcasing my ability to build a full-stack web application with modern tools.
- \* [olx-clone/app](#)

### **Weather App** | *React, API, Git*

- \* Developed a Weather App using Implement Api to fetch all cities and countries current weather
- \* [weather-app/app](#)

### **Turo Website Clone** | *React*

- \* Make a turo website clone using React
- \* turo-clone/app

## **Quiz App** | *React, Git*

- \* quiz-app/app
